

HORTECH H RAPID SR

Rapid SR is a machine for head vegetables harvest. The harvesting element is equipped with two vertical corrugated belts that allow to transport tightly the product and with an inferior belt that carries the product to an upper belt that is to say a work surface for the cleaning.

This model has been created for all farmers who work for industry, that is to say the so called “for processing” and the vegetables that can be harvested are i. e.: escarole, endive, chicory, celery, cabbage, fennel, etc.

In this case too the machine can be personalized according to the customer’s requirements, even if the basic equipment is good enough to do any kind of harvest. By request it is possible to equip the machine with a supplementary belt which conveys the product into a trailer.

Rapid SR allows to reduce the costs for the workforce and to ameliorate the working conditions and the working organisation. According to the harvesting bar conformation the minimum distance between rows must be 40 cm.

- accessories:
